

UBAID KHAN

2nd Year Computer Engineering Student · AI & Full-Stack Developer

Ahmedabad & Gandhinagar, IN | 9624444730 | me.khanubaid@gmail.com | linkedin.com/in/notubaid | github.com/notUbaid

EDUCATION

B.Tech in Computer Engineering · Institute of Advanced Research, Gandhinagar

May 2024 – June 2028

TECHNICAL SKILLS

Languages & Frameworks: Python, JavaScript / TypeScript, C/C++, React.js, Next.js, Node.js, FastAPI, Express, Tailwind CSS

AI & Dev Tools: Machine Learning, LLM APIs, Docker, Firebase, Git/GitHub, GitHub Actions, Vercel, Render, REST API Design, JWT, SQL, PostgreSQL

EXPERIENCE

Digital Head · CSGC – Computer Science & Gaming Club, IAR

Aug 2024 – Present

- Built and deployed an internal web portal for club operations — handling member registration, event sign-ups, and real-time scoring for 100+ members across 20+ university events; replaced manual spreadsheet workflows entirely.
- Developed automated scoring and leaderboard systems in Python, and maintained structured member databases and event documentation that reduced per-event admin overhead significantly.

PROJECTS

Cloud Alert Triage – AI-Powered Incident Response Environment [GitHub](#) · [Hugging Face](#)

- Built an OpenEnv-compliant Reinforcement Learning (RL) / Machine Learning environment where AI agents classify, correlate, and remediate cloud alerts across a 17-service microservice graph with cascade failures, injected noise, and stealth root-cause incidents.
- Agents achieved consistent reward scores of 0.83–0.97 across difficulty tiers; reward mechanisms cover triage accuracy, severity reasoning, incident correlation, and false-alert reduction — validated with reproducible pytest benchmarks.
- Containerised FastAPI server (Docker) exposing `/reset`, `/step`, `/tasks` endpoints; deployed to HuggingFace Spaces. Submitted to Meta × PyTorch × HuggingFace OpenEnv Hackathon 2026. Stack: Python 3.11, FastAPI, Pydantic, Docker.

Inventra – Multi-Role Inventory Management System **3rd Place, Codeversity National Hackathon @ IIT Gandhinagar (2026)**

[GitHub](#) · [Live](#)

- Engineered a production-ready inventory platform with 8+ modules — multi-warehouse tracking, immutable stock ledger, granular RBAC across 3 roles, SKU/barcode management, and a live KPI dashboard — built and deployed end-to-end in under 24 hours.
- Stack: React 19, Node.js, Express, SQLite, JWT, Tailwind CSS.

Veda – AI-Powered Hospital Pharmacy Management **2nd Place, Aetrix Hackathon @ PDEU (2026)** [GitHub](#) · [Live](#)

- Built an AI-powered pharmacy platform with batch-level inventory tracking, FEFO-based stock management, and Gemini-powered demand prediction — reducing projected medicine wastage by up to 74% in simulation across multi-role hospital workflows.
- Stack: React 19, TypeScript, Firebase, Gemini 1.5 Flash, Recharts, Tailwind CSS.

Ahmedabad Metro Interactive Map [GitHub](#) · [Live](#)

- Navigation tool covering all 54 operational stations across both Ahmedabad lines — implements Dijkstra's algorithm for optimal routing, interchange detection, and live GPS nearest-station lookup with walking-time estimates. Updated with latest official timetables.
- 1,000+ total visits since launch; built with React 19, TypeScript, Vite, Tailwind CSS, shadcn/ui. Deployed on Vercel; Android app currently in review for Google Play Store launch.

The Choco Munch – Freelance Web Development [Live](#)

- Designed and deployed a responsive, mobile-first business website end-to-end — requirements to production — with SEO optimisation, structured content strategy, and a conversion-focused layout for a paying client.
- Improved online credibility and professional presence, leading to a measurable increase in client trust and inbound inquiries post-launch.

ADDITIONAL

Languages: English, Hindi, Gujarati

NGO Contributor – InAmigos Foundation: Contributed to social impact initiatives through fundraising campaigns, community outreach, and digital design work — creating visual content and online materials to support the foundation's mission.
